

Differential Sets

Tobamoviruses (Tobacco mosaic virus (TMV), Tomato mosaic virus (ToMV), Tobacco mild green mosaic virus (TMGMV), Paprika mild mottle virus (PaMMV), Pepper mild mottle virus (PMMoV)) and Bell pepper mottle virus (BPMoV) - Pepper - **Pepper**

The genus *Tobamovirus* includes multiple species that are pathogenic on *Capsicum spp* including the type species *Tobacco Mosaic Virus* (TMV), and the serologically related *Tomato Mosaic Virus* (ToMV), *Pepper mild mottle virus* (PMMoV) and several other plant viruses.

The nomenclature of Tobamoviruses has been the subject to several revisions in the period between 1980 and 2004. International Committee on Taxonomy of Viruses (ICTV) is the standard reference for virus taxonomy. More information can be found in the ICTV master species list <https://talk.ictvonline.org/>

Resistance is governed by four different dominant single genes (*L1*, *L2*, *L3* and *L4*), which are considered to be alleles at the locus *L*. The different alleles provide resistance towards multiple *Tobamoviruses* species that are classified into four groups (pepper Tobamovirus group 0-3) on the basis of their interaction with the corresponding plant resistance genes.

Pepper mild mottle virus isolates overcome the *L4* resistance gene have been reported in Japan (Genda et al 2007) and Israel (Antigun et al, 2008) however till now those isolates did not lead to commercial damage.

Pepper Tobamovirus Group	0	1	2	3
ISF Code →	TMV: 0,1,2 ToMV: 0,1,2 BPMoV	TMGMV PaMMV	PMMoV: 1.2	PMMoV: 1.2.3

Differential hosts

	Gene	0	1	2	3
Lamu, Early Calwonder	-	S	S	S	S
Tisana, Yolo Wonder	<i>L1</i>	HR	S	S	S
Tabasco	<i>L2</i>	HR	HR	S	S
Solario F1, Novi 3, PI159236	<i>L3</i>	HR	HR	HR	S
Tom4, PI260429	<i>L4</i>	HR	HR	HR	HR

S = susceptible; HR= highly resistant
